

A Brief Report on Field visit to Lungleng 24 September 2016

Lungleng being the college's adopted village, the site was chosen for departmental research site. On 24th September 2016, all faculties of Department of Biotechnology along with the 5th semester students, went on a field trip to Lungleng. The college bus started from the campus early in the morning and set off picking up few teachers and students on the way.

5th Semester students (2014-2017 batch)

On reaching the place, locals were approached for field survey guidance. Sugarcane fields nearby were visited, and sample collection was done. Morphological analysis was done for each sugarcane sample collected. Samples were taken back to the department lab for further biochemical analysis.

The field trip was both educational and gratifying. It provided a wonderful platform for close interaction between teachers and students beyond the classroom premises. The students learnt basic research methodologies and greatly benefitted from the field survey.

The home journey was not as smooth with mechanical issues with the bus. All were stranded on the road side and got back late in the evening.

Overall, the visit to Lungleng was exciting, fun and fruitful.
